Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Davison et al. (U.S. Pat. No. 5,922,974 A) (hereinafter “Davison”). Regarding claims 1 and 4, Davison teaches an apparatus comprising: a transparent vessel (glass tube 27); at least one sorbent material (e.g., molecular sieve resin material, i.e., carbosphere 33, for sorbing or trapping soil gas molecules); and a separation means (e.g., gas permeable barrier 38) (see 1, line 55 – col. 3, line 48; figures 1 – 3). The Courts have held that apparatus claims must be structurally distinguishable from the prior art in terms of structure, not function. See *In re Danley*, 120 USPQ 528, 531 (CCPA 1959); and *Hewlett-Packard Co. V. Bausch and Lomb, Inc.*, 15 USPQ2d 1525, 1528 (Fed. Cir. 1990). The Courts have held that the manner of operating an apparatus does not differentiate an apparatus claim from the prior art, if the prior art apparatus teaches all of the structural limitations of the claim. See *Ex Parte Masham*, 2 USPQ2d 1647 (BPAI 1987) (see MPEP § 2114).

Allowable Subject Matter

Claims 2, 3, 5 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 1743

The following is a statement of reasons for the indication of allowable subject matter:

The cited prior art neither teach nor fairly suggest the further incorporation within the Davison apparatus a stirring means as recited in claim 2. The cited prior art neither teach nor fairly suggest the further incorporation within the Davison apparatus separation means comprising a dialysis bag as recited in claim 3. The cited prior art neither teach nor fairly suggest the further incorporation within the Davison apparatus a sealable means comprising at least one septum as recited in claim 6.

Claims 7 – 13 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 7, the cited prior art neither teach nor fairly suggest the claimed methodology for measuring release rates of contaminants in a at least one of a fast release mode and a slow release mode.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure: The cited prior art teach various sampling and analytical devices.
